March 2013, Issue 9

Hello!

March is a busy month for us so we've kept this issue short and sweet. Below you can find out the latest product updates and enhancements, and we also have an important notice for those users who integrate one or more of our solutions to Exo business.

IMPORTANT: Integration with Exo version 8.5x

Please note that due to fundamental and structural changes in the latest release of MYOB Exo 8.5 (mainly in the area of currencies/exchange rates), the current versions of all our VIS products (except for Xeno.NET) cannot yet be integrated to this version.

We advise you to hold off upgrading your Exo database until we have completed updating our solutions to incorporate these recent changes. The team are currently updating all our products with an expected ETA of mid-April. Please talk to us before upgrading your Exo database to version 8.5x to discuss foreseeable consequences and for a status update.

Product updates

VI Assets

- New reports: GL transaction journals: detailed & summarized reports of the journals that have been posted into your General Ledger (if integrated)
- Ability to choose the visible columns in the book history tab i.e. hide columns that aren't important to you
- Supplier name added to the **Physical Audit Listing** report
- **Pro only**: Single/bulk rate updater/depreciation re-calculator: tool that lets you either update the depreciation rate of a single asset or a bulk lot of assets that is effective from the 1st period of the current financial year, and calculates a depreciation correction journal for the difference
- **Pro only**: Ability to set a default method and rate for each minor Category
- Fixed the location filter in the **Fixed Asset Position and Depreciation Statement** report

VI Importer

- **Debtor Payments import**: added bank, branch, cheque number, and drawer fields
- **Debtors import**: added 'credit terms' field
- **Contacts import**: ability to specify the debtor/creditor account contact is associated with as well as if they are the default contact person

Xeno.NET API

- Integration with Exo v8.5
- Added **AdjustOut** and **AdjustIn** methods
